

Student Progress Supervision Form (Semester 1)

Student Name	Maureen Mukami	Reg. No.	SCT211-0052/2022	
Supervisor Name	Dr Agnes N. Mindila	Year	4	
Department	School of Computing and Information Technology (SCIT)	Semester	1	
Course Title	BSc Computer Science		Meeting No.	2
Project Title	A blockchain-based system for tracing organic honey production in Kenya			
Summary of issues discussed	-Introduction and thoroughly going through the proposed project and trying to understand how it fits into the real world. -Refining the proposed objectives of the project and removing unclear or vague requirements. - Identifying critical data to investigate and validate to bring the project to fruition. -Understanding the team composition and the different role assignment and validating each role with unique computation area to focus on. -Importance of library sources and how best leverage them for our project.			
Work required by next meeting /Agreed Action	- Research summary documentation of state of the art of current applications of blockchain frameworks in tracing honey production throughout the value chain and the different gaps in terms of the different computational areas to fill. - Gaining key domain knowledge on honey production to help best align our objectives with real world relevance - Refining the team roles - Identifying key organizations and government institutions that can help us in acquiring relevant data on bee floral sources, meteorological data, honey processing(aggregation)			
Date of next meeting	11/12/2025			

Signature of Student		Date	21/11/2025
Signature of Supervisor		Date	21/11/2025
Signature of Supervisor
